

"The Cleaning Equipment Specialists Since 1976"

High PSI LTD Client,

Why do you need a Schedule Maintenance program from High PSI LTD
For your cleaning equipment?

Pressure washers and steam cleaners operate under high pressure and high heat, so you want to make sure this equipment is always in excellent operating condition. A failure could cost you money with lost work and more expensive repairs. If your equipment is not working at full capacity, you will be less productive and less profitable. Machines that are running all day every day should be checked at least four to six times a year. If your equipment is used a few hours a week, we recommend twice a year. Our talented tech will thoroughly check out your equipment and let you know if anything other than the basic maintenance is needed.

There is also a big savings over an emergency repair. Our scheduled Maintenance is \$195.00 for the service call and up to one hour of labor. Our regular price for repairs is \$145.00 for the service call and \$145.00 per hour. A savings of \$95.00 and plus the lost time if your equipment does not work when you need it. We also discount the parts for schedule maintenance 10%.

We are always available to evaluate your current equipment and detergents. We will recommend the best product to keep you as productive and profitable as possible.

Thank you for your business.

Best Regards
Stan Valiulis
President and Owner
